

Pharmaceutical Services GmbH

PBMC

- More than 40 audited and qualified labs for isolation in more than 15 countries worldwide
- Laboratory training
- Qualification and auditing of new laboratories
- Laboratory material (kits) supply to site and lab
- Blood sample logistics

High-quality peripheral blood mononuclear cells (PBMC) are a prerequisite for functional PBMC activity assays. The collection and logistics of PBMC can pose a significant challenge in multicenter trials.

At **ABF Pharmaceutical Services** we have developed an audited and qualified laboratory network to ensure high-quality PBMC isolation.

PBMCs have to be isolated within 6 hours after the blood is drawn. We ensure that blood samples are sent immediately to the processing lab for isolation and freezing.
